

Setup AWS RSS feed on Discord

1. On Discord create a new server from the menu on the left or choose an existing one

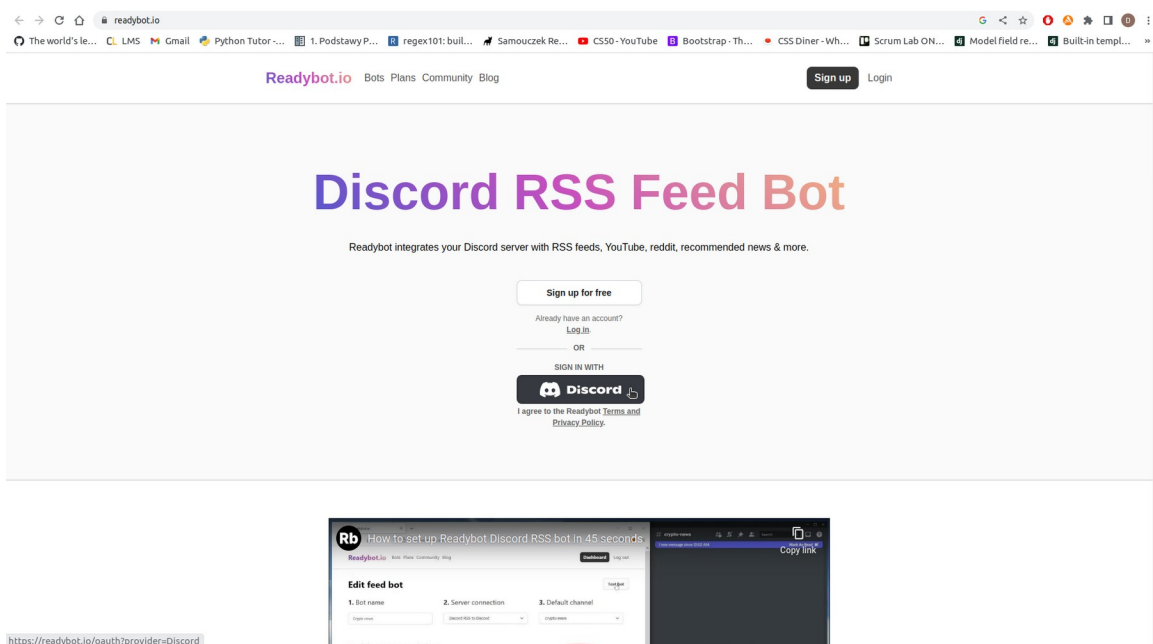

2. Create a new text channel

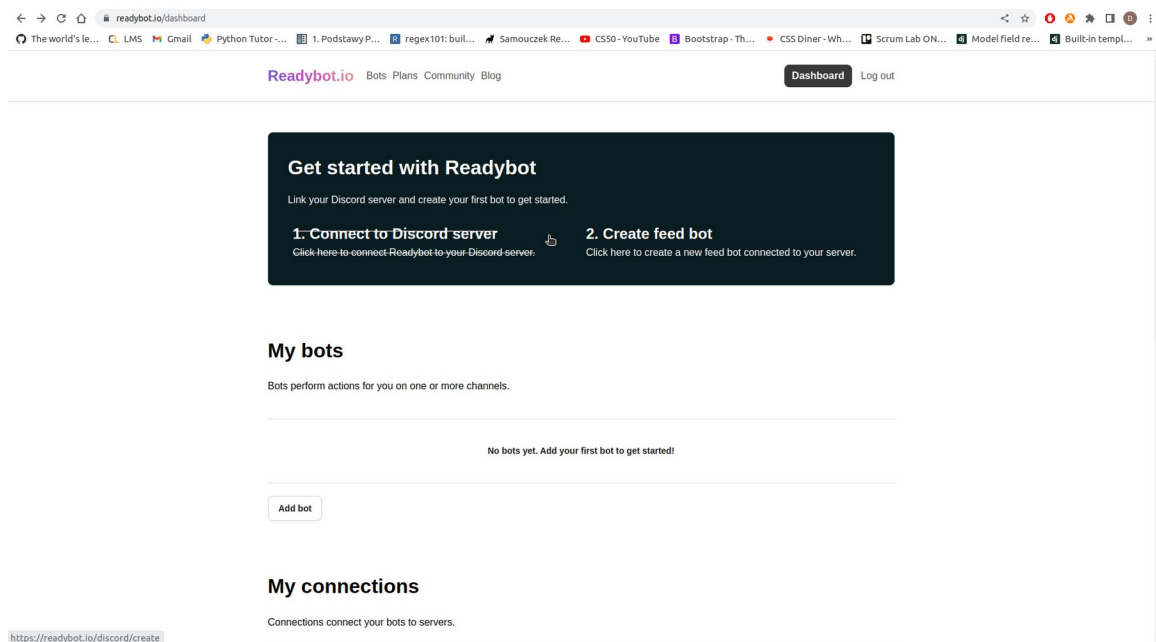

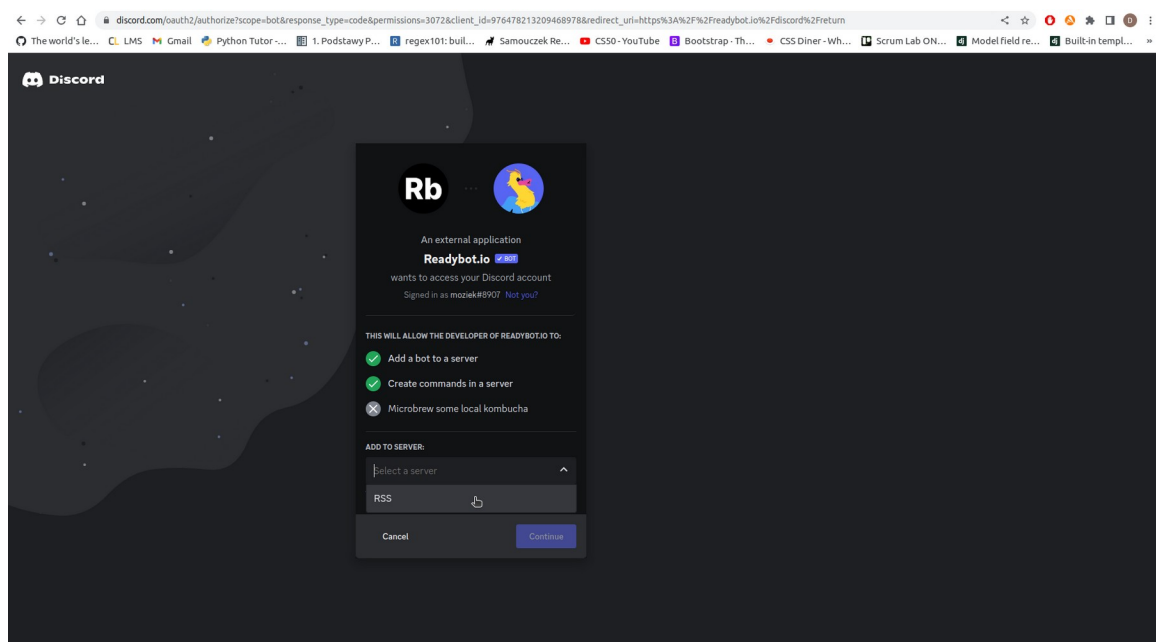

3. Go to <https://readybot.io/> and sign in

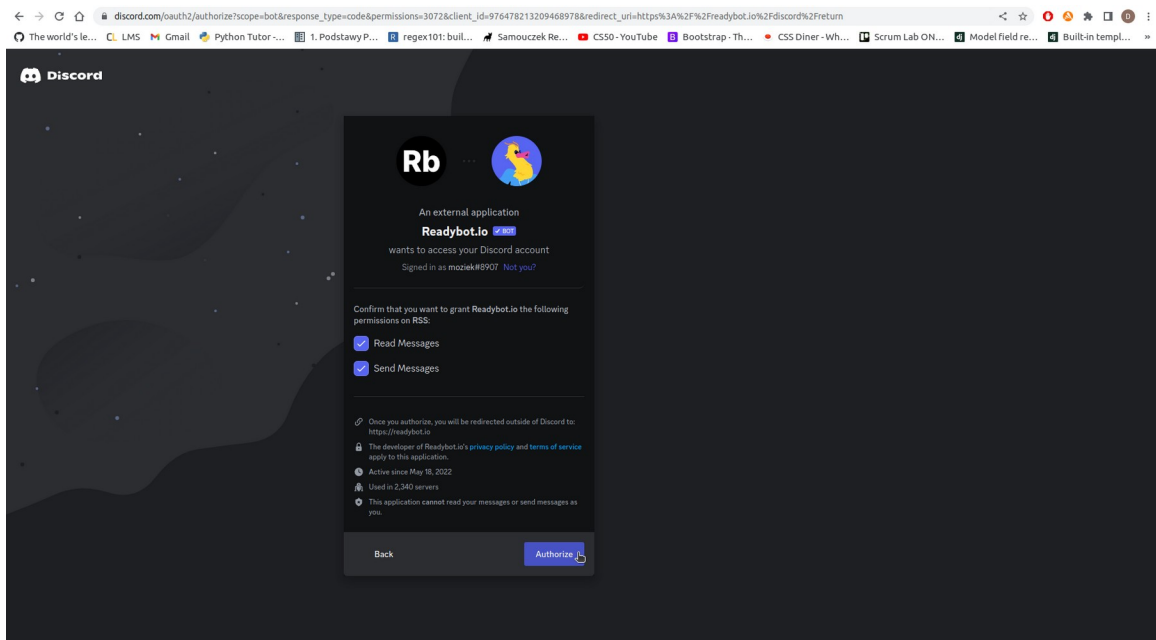

4. Click on "Connect to Discord Server"

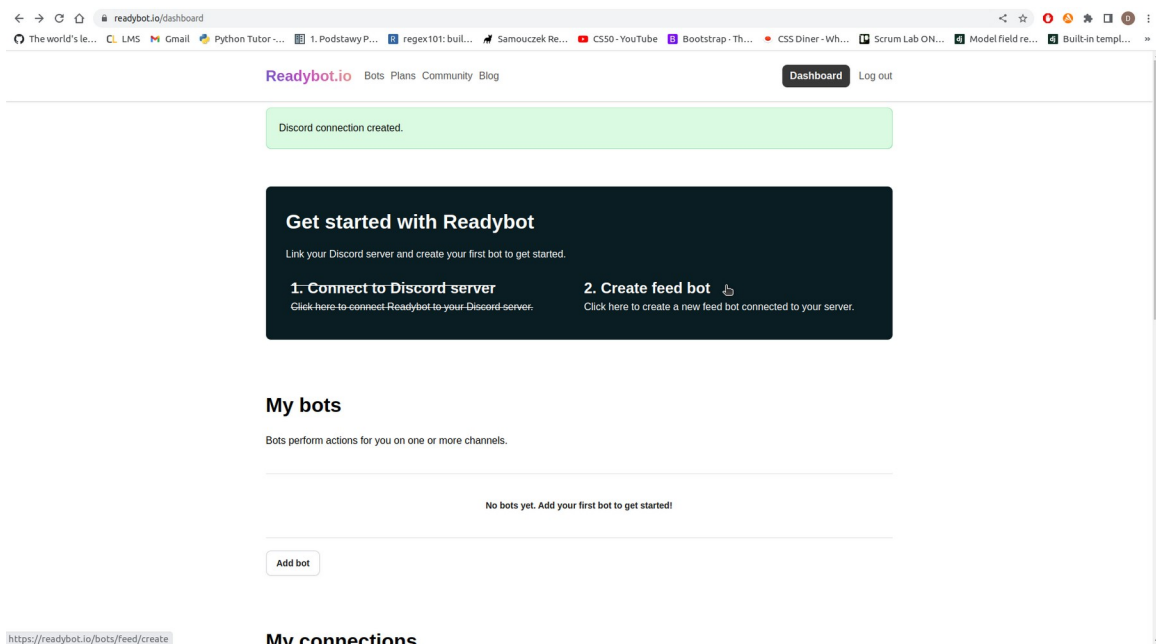

5. Select the server

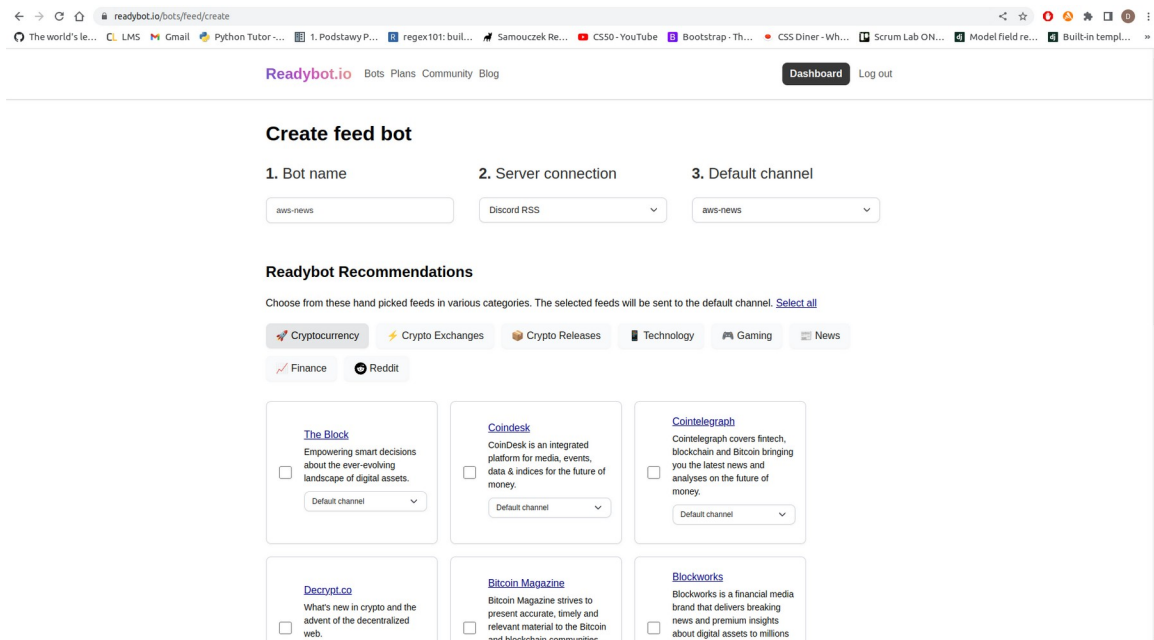

6. Click on "Authorize"

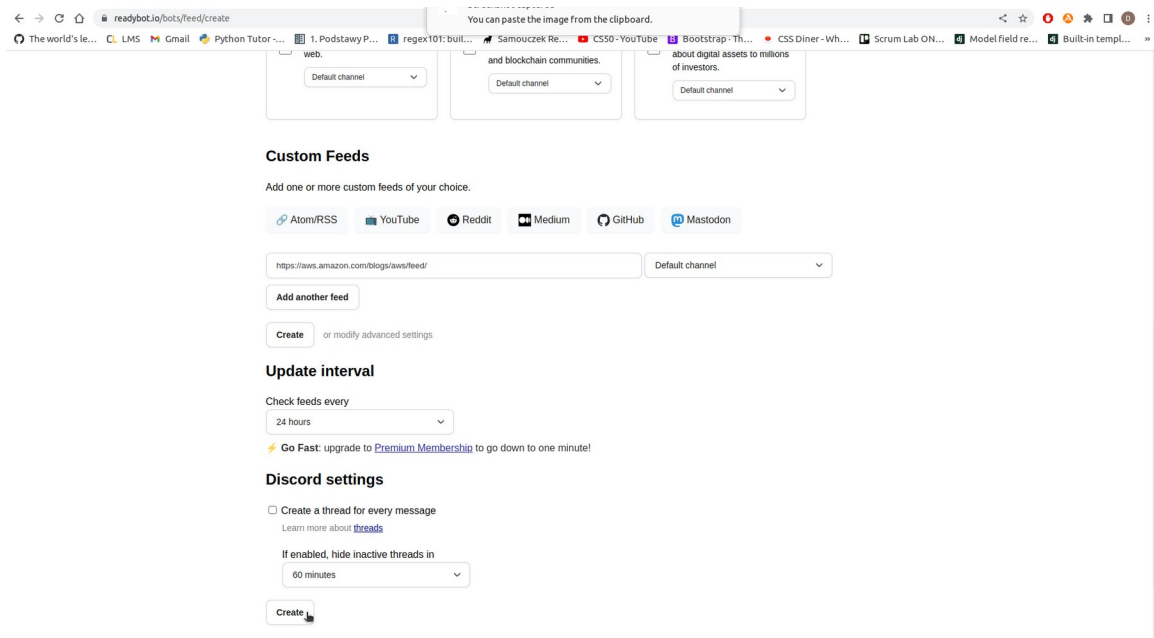

7. Click on "Create feed bot"

8. Type the Bot name, select Server connection and the default channel

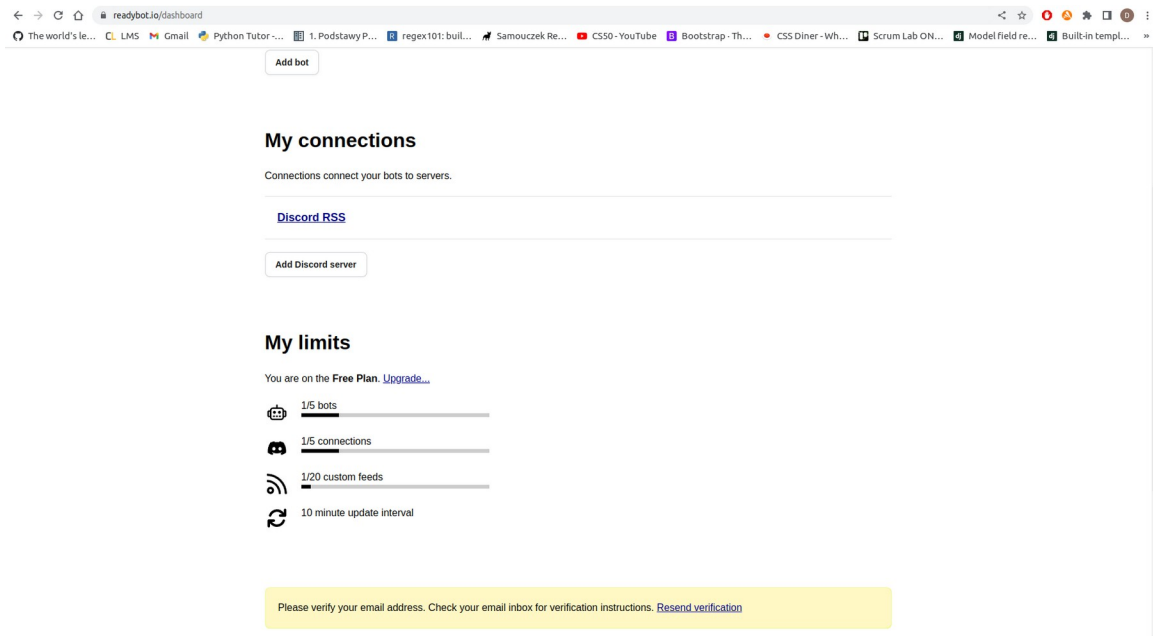

9. Add the RSS feed URL from the list on <https://jiripik.com/2021/09/02/list-of-all-amazon-aws-rss-feeds/> website (remember to include "https://" in the URL) and choose the channel (You can create different channels for different RSS feeds)

10. Select how often You want to update the feeds and if You want to create a new thread for every message

11. Click on "Create"

12. Verify Your email address

13. Wait for the first messages to appear on the channel
