

AWS Secrets Manager cross region backup

1. Open the [AWS Secrets Manager console](#) and choose the secret.
2. Click on **Replicate secret to other Regions** in the upper right corner.

3. Choose the region, encryption key and click on **Replicate secret**.

4. You can automate the process by using AWS CLI and creating automated cron script. Here's the example command:

```
aws secretsmanager replicate-secret-to-regions --secret-id MyTestSecret --  
add-replica-regions Region=eu-west-3
```
